Professional Summary

Computer science graduate (Dean's List) and technical writer specializing in developer documentation: API references, quickstarts, troubleshooting guides, and docs-as-code workflows. Tests what I document by running requests with cURL, Postman, and Python, and corrects the docs where the system behaves differently from the draft. Seeking a remote technical writer or documentation engineer role.

Technical Skills

Documentation: Markdown, OpenAPI 3.1, MkDocs Material, docs-as-code, Git, GitHub, GitHub Pages
Documentation types: API references, developer quickstarts, architecture overviews, user guides, error-state documentation, troubleshooting runbooks, standard operating procedures
API and engineering foundation: REST APIs, HTTP methods and status codes, JSON, Postman, cURL, Python (FastAPI, PyTorch)
Environments: Linux and PowerShell command lines

Documentation Projects

Resend API Documentation (independent sample)

- Wrote a quickstart, API reference, batch-sending guide, and error catalog for a transactional email API, plus an OpenAPI 3.1 specification.
- Ran the documented requests against the live API (send, batch, retrieve, and 401, 403, 404, and 422 errors) and corrected drafts where responses differed, including null fields and a shared validation_error name.
- Provided cURL and Python examples with Linux/macOS and PowerShell variants and kept API keys in environment variables.

Troubleshooting Guide for the Resend API

- Wrote a symptom-first guide with a triage table, error runbooks, DNS and webhook-signature checks (Python examples), and a checklist for contacting support.
- Used neutral, task-focused language and defined terms inline for readers who are mid-incident.

InSight: Cataract Screening System and Documentation ***Lead Developer and Technical Writer***

- Built a full-stack Python application (PyTorch ResNet-18, FastAPI, Streamlit, Supabase) as a final-year project; the model reached 99.5% accuracy on a held-out test split of a public dataset.
- Wrote the documentation for two audiences: a developer quickstart and API reference for POST /predict/ (cURL and Python multipart examples, 422 and 500 errors), and a clinical operator guide covering screening, Grad-CAM interpretation, and referral report export.
- Designed and ran manual and automated REST API test cases with cURL and Postman and used SQL queries to audit diagnostic parameters and data integrity.

Experience

Technical Support & Systems Volunteer
Christian Best Camps of Kenya (CBCK) Jan 2024 – Mar 2024

- Authored 10+ Standard Operating Procedures to standardize troubleshooting.
- Resolved software and network issues for 20+ users as the primary point of contact.

Software Quality & Engineering Intern
Skillmind Software Limited, Nairobi Jan 2025 – Mar 2025

- Logged structured defect reports from functional and integration testing, improving mobile UX by 15%.
- Diagnosed API response errors and inconsistencies with Chrome DevTools to support root-cause analysis.
- Organized requirement and bug data in Zoho CRM to improve tracking.

Additional Project

E-Commerce E2E API Automation Suite ***Lead QA Engineer (Postman)***

- Built an automated end-to-end REST API test suite for a full checkout workflow.
- Wrote assertions to verify business logic, such as Price × Quantity = Total, and test data cleanup.

Education

B.Sc. Computer Science, Strathmore University

- Dean's List, 3rd and 4th year
- Coursework: Human-Computer Interaction, Software Engineering, Technical Writing, Research Methodology, Computer Networks, Server Administration

Community

- Member, Write the Docs community
