Professional Summary

Computer Science graduate (Dean's List) and technical writer specializing in developer-facing documentation: REST API references, architecture guides and docs-as-code workflows. Builds documentation by running the code, verifying requests and responses with cURL and Postman, and writing separate paths for technical and non-technical audiences. Seeking a remote technical writer or documentation engineer role.

Technical Skills

- **Documentation and markup:** Markdown, OpenAPI (Swagger), MkDocs Material, docs-as-code, Git, GitHub, GitHub Pages
- **API and engineering foundation:** REST APIs, HTTP methods and status codes, Postman, cURL, Python (FastAPI, PyTorch), Linux command line
- **Documentation types:** API references, developer quickstarts, architecture overviews, user guides, error-state documentation, troubleshooting runbooks
- **Process:** SME interviews, peer review, verifying documented behavior locally, comparing requirements against QA test cases

Selected Documentation Projects

InSight Clinical Decision Support Documentation | Developer, API and clinical user docs

- Wrote end-to-end documentation for an AI-driven cataract screening service, serving two audiences: integration engineers and clinical staff.
- Authored a developer quickstart covering environment isolation and local service startup, so engineers can run the service from a clean setup.
- Documented the architecture, including the pre-validation gate and Grad-CAM heatmap output.
- Wrote the endpoint reference for `POST /predict/`, with multipart request examples in cURL and Python, binary image handling, and documented 422 and 500 error responses.
- Created a clinical operator guide walking nurses through screening, interpreting Grad-CAM results and exporting referral reports.
- Analyzed the PyTorch inference engine and FastAPI backend, and verified request and response cycles with cURL and Postman before publishing.

Public API Documentation and Quickstart (Stripe API) | In progress

- Building a "zero to first successful call" onboarding suite from the OpenAPI specification: authentication guide, parameter tables, copyable multi-language code samples and common response workflows.

Production Troubleshooting Runbooks | In progress

- Developing a diagnostic runbook with a root cause analysis template, error code catalog and step-by-step remediation for production errors.

Documentation Portfolio Site | Docs-as-code

- Designed, wrote and deployed a documentation site using MkDocs Material and Markdown, version-controlled in Git and published through GitHub Pages.

Education

B.Sc. Computer Science, Strathmore University | [graduation year]

- Dean's List, 3rd and 4th year
- Coursework in Human-Computer Interaction (HCI) and [relevant courses, e.g. software engineering, databases, networking]

Professional Development and Community

- Member, Write the Docs community
- [Optional: technical writing course, certification or sprint, with dates]

Additional Experience

- [Add any QA, internship, or support experience here, with one or two lines each. Delete this section if you have none.]
